

LABORATORY REPORT ON INFLAMMATORY MARKER
Cardio Vascular Disease (CVD)

****This person, male, 76 years old, had higher level of increased-risk for CVD (or heart attack), started in June 2016 to take HanaBerry Veggie-caps. However, after 7 months of continuous taking HanaBerry Veggie-caps, his risk of CVD (or heart attack) has reduced to lower than the level of Low Risk for CVD..!**

****He said during Jun 2016 - Jan 2017; the only change in his eating was he added HanaBerry Veggie-caps to his list of daily health food consumption. And he took 3 veggie capsules in the morning, 3 in the evening, before meals.**

****HanaBerry Veggie-caps contains 30mg Deep-sea Calcium, 100mg Hanabiratake mushroom and 370mg Ricebrrry.**

QUEST LABORATORIES: Singapore

LABORATORY REPORT

LAB NO. 16-3455074

DATE: 10-Jun-16

INFLAMMATORY MARKERS:

hsCRP

RESULT UNIT

3.05 mg/L

Cardio-Vascular Disease (CVD) Risk Factor/Inflammatory

Less than 1.0	mg/L	Low Risk for CVD
Between 1.0 - 3.0	mg/L	Average Risk for CVD
Greater than 3.0	mg/L	Increased Risk for CVD
Greater than 5.0	mg/L	Suggrstion of infetion/other sources of inflammation
